Students will work in teams to develop a project plan for one of YOUR typical projects.

We will develop templates which can be used on the TPMA Project Management Program Exam and on your future projects.

Unlike some “general” project management courses, which treat the subject as an academic exercise, or a PM software class, the TPMA Project Management Program was developed by Project Managers with extensive field experience. The focus is on simple, proven techniques that produce results.

The Trainer for this program is Don Nelson RCDD/WD, TPM, PMP. Don has extensive Project Management Experience with New England Telephone, AT&T, Bechtel, and Stone & Webster Engineering . He was the Director of Microwave Engineering & Construction at AT&T Network Wireless Systems. Don has been a BICSI Master Instructor, and is the Subject Matter Expert Team Leader on the subject of Project Management for all BICSI Manuals.

The program will focus on the nine areas of Project Management recognized By the Project Management Institute (PMI) and the Telecommunications Project Management Association (TPMA):

- Project Human Resources Management
- Project Scope Management
- Project Integration Management
- Project Time Management
- Project Cost Management
- Project Quality Management
- Project Communications Management
- Project Risk Management
- Project Procurement Management

The 10th project area will focus on the **project technical requirements** and the **process** required To design and implement the project.

The TPM Exam is an “open book” demonstrations of Project Management knowledge & skills. The Exam is a “take home” Exam. You can begin the Exam on Friday afternoon , or take it back to your home or office. Software tools such as MS Project, Primavera, Visio etc. may be used on the Exam.

This Program will help you bring in your future projects;

- On time!
- Under Budget!
- Meeting Specification!
- Exceeding Customer Expectations!
